# Chris Palmer

Full-Stack Senior Software Engineer

web-dev.uk

ABOUT

With over 6 years of experience in both websites and app development, my expertise in technology has proven to yield effective results for any industry. Stemming from music, publishing, stock market data, digital design and hotels / property, I have developed a sound spectrum of mobile and web applications that are production ready and scalable for large organisations such as Sky and NTT DATA. Working alongside good teams of developers I have scaled many projects from ideation to launch including the glass TV launch for Sky dot com. I also love to produce music in my spare time from my years of working as a sound engineer and hope to combine my two passions someday.
